~~TOP SECRET~~

TOP SECRETDate 12 June 1981**SUMMARY**

The IDFEX1 program was written to replace the IDF Exchange programs on the Univac 494 computer. IDFEX1 will extract certain data direct from the IDF and create a tape. The output data format and record types are in the document Installations Data File - Magnetic Tape Format, April 1981, [redacted] N40404. This information is sent to other users in the Intelligence Community. (Currently CIA/OSR and DIA/MIA are our only users).

25X1

IDFEX1 will extract directly from the IDF. The requestor must specify what records are to be retrieved. One or all can be selected. Also, the user must specify a range of MRN numbers to do the retrieval on. This extracted data is formatted on the requestors tape and sent to the requestor.

IDFEX1 provides the capability for the user to specify what type of data is to be extracted. 'MI' and 'KH', 'Aircraft' or both types of data may be selected by the user. There are eight IDF records that the user can specify - TGT-HDR, TGT-COLL, TGT-GEN-REF, TGT-STA-DES, TGT-DEF-SEC, TGT-OB, TGT-PHOT, and TGT-PRFL. These must be specified.

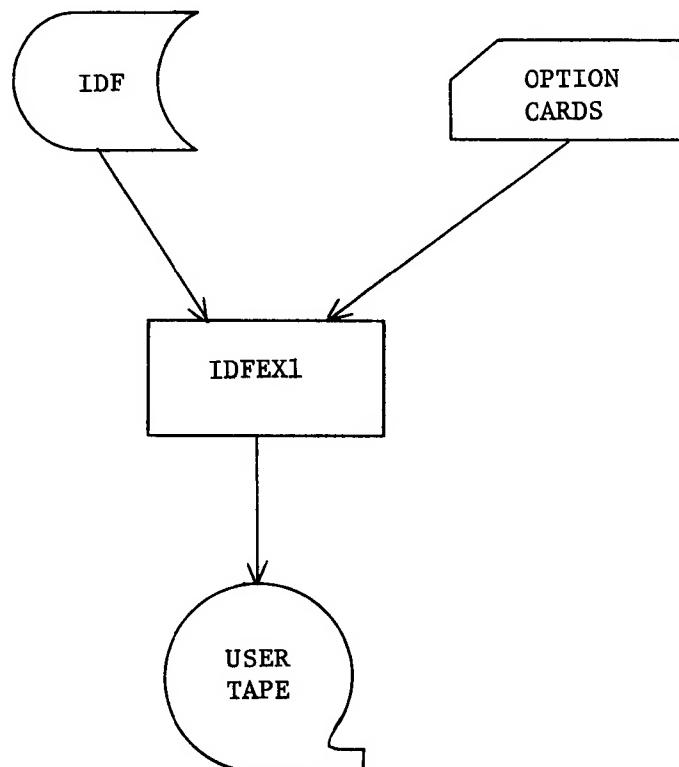

IDFEX1 must be restarted completely; it can be rerun at anytime.

The IDFEX1 program is coded in ASCII COBOL and uses DMS for file processing.

COMPUTER RUN PREPARATION

PUNCHED CARD INPUT

Type:

Identification:

Format:

YYYYYYYYYYYY N 3 000010999999

N = numeral
A = letter
X = any legitimate character
in card code

Z = optional character (letter or numeral)
& = plus
- = minus
S = special character

<u>Field</u>	<u>Column</u>	<u>Comments</u>
RESTART-OPTION = 'Y' *	1	Indicates program to be restarted
TGT-HDR = 'Y'	3	All TGT-HDR records to be processed
TGT-COLL = 'Y'	4	All TGT-COLL records to be processed
TGT-GEN-REF = 'Y'	5	All TGT-GEN-REF records to be processed
TGT-STA-DES = 'Y'	6	All TGT-STA-DES records to be processed
TGT-DEF-SEC = 'Y'	7	All TGT-DEF-SEC records to be processed
TGT-OB = 'Y'	8	All TGT-OB records to be processed
TGT-PHOT = 'Y'	9	All TGT-PHOT records to be processed
TGT-PRFL = 'Y'	10	All TGT-PRFL records to be processed
PROCESS-OPTION = 'N'	13	Data is to be processed without the mass storage file or input. Range must be specified
DATA-TYPE = 1, 2, 3	16	1 = only Aircraft data to be processed 2 = only MI and KH data to be processed 3 = all data is to be processed
* OTHERWISE FIELD LEFT BLANK	5	

* OTHERWISE FIELD LEFT BLANK

COMPUTER RUN PREPARATION (Continued)

PUNCHED CARD INPUT (Continued)

Type:

Identification:

Format:

N = numeral
 A = letter
 X = any legitimate character
 in card code

Z = optional character (letter or
 numeral)
 + = plus
 - = minus
 S = special character

<u>Field</u>	<u>Column</u>	<u>Comments</u>
MRN RANGE-BEGIN	19-24	- Used to process a range of MRNs.
MRN RANGE-END	25-30	- If Process-Option field is used, these fields must contain the MRN number to begin processing and the MRN number to end processing. - If Process-Option field is blank, these fields must also be blank.

PUNCHED CARD INPUT (Continued)

<u>Field</u>	<u>Column</u>	<u>Comments</u>
Beginning Range	19-24	Beginning Range of MRN's
End Range	25-30	Ending Range of MRN's

Source: Card is to be created by DCOB

Sequence: Card must follow '@XQT' statement in operational runstream

Restrictions: MULTIPLE CAN BE USED
Only one input card per run

Peripheral Device: Card-Reader

Quantity: 1

Disposition:

NORMAL RUN INSTRUCTIONS

Initiation:

Monitor:

<u>Message</u>	<u>Cause</u>	<u>Operator Action</u>
Operator, enter output real number of this run EX*01234	Program requires tape number	Enter tape number (See next page for example of console message)
_____ were input to the sort _____ were output to the sort _____ were duplicate records and not processed' _____ records put in the IDFHISTEX from the sort		
Sort is not complete	Statistics from Sort Routine of the IDFHISTEX Task	None
Task is not complete	Statistics from the IDFHISTEX Program	None

~~TOP SECRET~~

~~TOP SECRET~~Program IDFEX1Date 12 June 1981

ABNORMAL RUN INSTRUCTIONS

Messages:

<u>Message</u>	<u>Cause</u>	<u>Operator Action</u>
No control card in run deck for this run	User did not insert a control card in runstream	Insert the control card following the @XQT statement, restart runstream
Invalid range on input card	End-range was greater than beginning range	Correct range on control card and restart runstream
Range on input card not numeric	Range on input card not a numeric ending	Correct range on control card and restart runstream
EOF reached in IDHISTEX file	Abnormal end of file	Notify CSD
Total records = _____		
Fatal data base error	A fatal data base error	Notify CSD
Record was _____		
Key was _____		
Error-Status = _____		
Data base key for _____ was bad	Invalid data base key	Notify CSD
Error status = _____		
men was _____		
Record-Type = _____		
Program continues		
Error on impact	DMS error occurred while imparting	Restart run, if error occurs again notify CSD
Error on open for retrieval	DMS error occurred while opening	Restart run, if error occurs again notify CSD
No IDFHISTEX Tape	Program error trying to read write to output tape	Notify CSD
Reel number was not a numeric entry	Operator entered an illegal output reel number	Enter correctly
Pls Reenter		

~~TOP SECRET~~

~~TOP SECRET~~Program IDFEX1Date 12 June 1981

ABNORMAL RUN INSTRUCTIONS (Continued)

<u>MESSAGE</u>	<u>CAUSE</u>	<u>OPERATOR ACTION</u>
Reel number was spaces Please Reenter	Operator entered spaces or zeros for output reel number	Enter correctly
Unable to locate a TGT-HDR Record with min _____	Program error	Notify CSD
Invalid key on Read	Program error	Notify CSD
Invalid key on Write	Program error	Notify CSD
Error sort counts not equal Sort in = _____ Sort out = _____	Program error	Notify CSD
Illegal data base key for _____ _____ Error Status = _____ MRN number was _____ Record type was _____ Processing continues _____	Data base error	Notify CSD; save printed output for CSD rep.

Error/Fault:
